

OUR COMMITMENT

Rutherford Global Power is a leading provider of temporary electrical solutions for the resources and civil infrastructure industries around the world. We specialize in the hire, sales, service and refurbishment of high voltage electrical plant and equipment, including: production, installation, testing, commissioning and electrical system design.

We will constantly challenge ourselves to improve our performance and shall actively pursue ever improving QSE outcomes through strong leadership, application of our values, provision of resources and the implementation of effective systems and processes.

Our culture of consultation, communication, co-operation, support and empowerment with our employees, customers, suppliers and government bodies ensures we consistently identify and control the QSE risks associated with every task we perform. At any time if risk to people, product and service or to the environment cannot be eliminated or controlled to an acceptable level we will not proceed with the task.

We have a number of measurable QSE Objectives that contribute to and support our overall goal. These objectives and the performance of our QSE Management Systems are reviewed regularly by our senior management and improvement opportunities are identified.

Health and Safety

We are committed to consistently working in a health and safety environment that meets or exceeds the requirements and expectations of our customers, OHSAS18001:2007, AS/NZS4801:2001 and local standards or legislation.

Our core belief is that "Zero Harm" is achievable and that every person has the right to return home every day in a fit and healthy state and that every person has the responsibility to ensure that they and everyone in the workplace returns home in the same manner.

Quality

We are committed to consistently providing goods and services that meet or exceed the requirements and expectations of our customers, ISO 9001:2008 and local standards or legislation.

Our business philosophy of partnering with suppliers and customers in solving their electrical challenges allows us to achieve this.

Environmental

We are a responsible caretaker of the environment and will undertake all of our operations to maximise environmental, economic and social benefits to the community as a whole, for both present and future generations.

We are committed to consistently managing our impact on the environment and producing environmental outcomes that meet or exceed the requirements and expectations of our customers, our community, ISO14001:2004 and local standards or legislation.
